

Brocock Compatto 'Target'

Brocock announce an exciting addition to the Compatto line up.

The new Compatto Target – a regulated Hunter Field Target version of the popular Brocock Compatto.

Developed in conjunction with the Dutch firm of Huma, who over the last 5 years have become renowned for their high-quality precision regulators, the new Compatto Target adds an increased shot count as well as better shot to shot consistency for the more discerning shooter.

By using the highest quality materials such as aircraft grade aluminium-bronze, chrome-moly steel and precision Belleville springs, the Huma regulator has been specially developed in a joint venture to be combined with the patented sling shot hammer system. This combination is able to reduce shot to shot variation to a 1% fluctuation, yet both are proven and reliable systems allowing Brocock to give two years between services.

Depending on the market, the Compatto Target is fitted as standard with the latest 'anti slip' soft touch stock finish.

The Compatto Target has been developed to compete in Hunter Field target competitions and at sub 12 foot pounds will deliver 115 shots in .177 calibre with a shot to shot consistency of only a few feet per second – or as good as your pellets will allow.

Because the Compatto has been specially adapted to take the new regulator system is not available from Brocock as a retrofit to existing Compatto rifles. As special version of the regulator is available directly from [Airgun Nut](#) for fitting to all existing Brocock rifles.
