

MLTC
OPTICS

PRODUCT RANGE:
2016

**THE FUTURE JUST
GOT BRIGHTER**

MTC PRODUCTS:

Nothing compares with MTC and over the last decade the company has grown into one of the UK's most respected suppliers of rifle scopes. MTC's range covers every sort of shooting, and with every scope designed for use with any type of rifle, there's no need to worry whether our products are tough enough. From competition use to everyday workhorse, an MTC scope earns its reputation day-in, day-out.

MTC PRO SERIES:

MTC scopes have always been the smart shooters choice, now the scopes themselves have just become a lot smarter with the introduction of the new PRO series. Magnetic covers, 2x magnifying turret window and even times-6 Factor magnification range are top features that are either unavailable elsewhere; or where they are cost many times more.

MTC VIPER-PRO

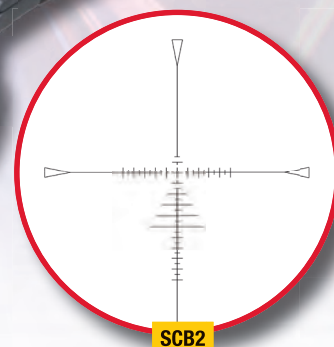

This revolutionary new scope contains the best and most sophisticated turret design available anywhere, the top turret contains a micro gearbox rotating at a 3:1 ratio – this means that three rotations of the top turret translates to a single rotation of the indicator drum making it much easier to know where you are in terms of rotations. Its turret 'window' shows a customisable ribbon that shows exactly the information you want from Mills to MOA – even yards or metres can be displayed: It's your choice. But all this gadgetry doesn't mean that we have skimped on our lenses, far from it as the multi coat lenses are a match for other quality scopes while the latest SCB2 reticle gives valuable bracketing and reference points to the shooter.

MODELS AVAILABLE:

3-18x50i
5-30x50i
10x50i

- Times-6 Factor magnification range to extend magnification range without sacrificing optical performance
- Super bright multi coated optics for a new standard of light transfer
- Magnetic, rotating flip-up lens covers
- Magnifying lens in rear cover for head-up display of turret markings
- Range 'window' on elevation turret
- 'Smart' range turret; geared to make up to 3 rotations of the turret relate to a single rotation of a customisable range display window
- Side parallax - 10 yards to infinity
- Illuminated reticle with separate on/off and brightness button

** To compliment the Viper Pro MTC have created an easy to follow interactive web-page to create and print out a ribbon with distances marked according to your rifle's ballistics, which will cover distances that substantially go beyond your zero point, as well as sub-zero ranges. When installed, it makes range compensation fast and accurate, switching to the scopes "click free" mode makes the process even faster. For more details www.mtcoptics.com/viperpro*

MODELS AVAILABLE:

3-18x50i
5-30x50i

MAMBA PRO

Same as the MTC Viper-Pro but with low profile windage and elevation turrets; to suit your shooting style.

- X6 times scopes to extend magnification range without sacrificing optical performance. Choice of 3-18 or 5-30x50
- Super bright multi coated optics for a new standard of light transfer
- Patented magnifying lens in rear cover for head-up display of parallax markings
- Side parallax - 10 yds to infinity
- Illuminated reticle with separate on/off and brightness button

MTC VIPER CONNECT

No other scope looks or performs like it

The Connect range is offered in two models, both are 3-12x magnification. Because of their ground breaking short eye-relief design, the Viper Connects give an amazingly wide field of view – almost double at 10x compared to a conventional scope

MODELS AVAILABLE:

3-12x32i

3-12x24i

- Ultra-low semi-target turrets on a 30mm tube choice of AMD or SCB2 illuminated reticle
- Side adjustable PA (down to 10 yards)
- Integral objective cover
- Small, light and compact
- Rubber eyepiece extender supplied
- Choice of 32 mm or slim line 24mm versions

Only suitable for low or non-recoiling rifles

MTC GENESIS:

The genesis range consists of two high quality scopes that use the best lenses available anywhere at their mid-price point. Genesis scopes are primarily designed for firearm use but are equally at home on any airgun.

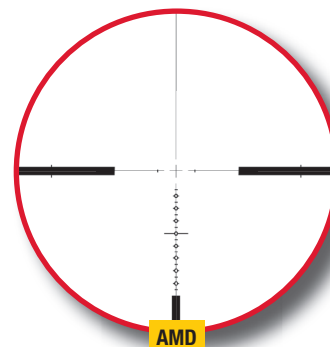

GENESIS 5-20x50i

With its fantastic optics, 5-20X zoom and 50mm objective lens, the scope is precision-made in Korea to MTC's demanding specification. The Genesis offers incredible optical performance at an amazingly reasonable price. All controls are designed to have an easy and slick operation and light transfer is kept high with use of a light gathering 30mm tube. The target-style adjusters are protected by screw on caps and each click moves the point of impact $\frac{1}{4}$ " at 100 yards and a coil erector spring set up helps keep things that way.

MODELS AVAILABLE:

5-20x50i

- 30mm tube – industry-standard
- Target turrets with protective caps – target turrets offer maximum versatility, screw-on caps protect your settings in the field
- 5-20X zoom, with other ranges under development
- AMD reticle, 2nd focal plane – offers versatility and an unobstructed sight picture
- Illuminated red reticle, 11-steps plus off
- Side adjustable PA, sharp image and minimal depth of field – focus range from infinity down to 10 yards
- Korean engineered, fully multi-coated lenses – maximum light transmission plus minimum flare
- Genuine Butler Creek flip-up covers supplied – front and rear, protect from dirt and water in the field and gun bag
- Coil erector spring

MTC GENESIS ULTRA LITE

Simple clear perfection

The GENESIS UL 3-9x40 (Ultra-light) scope combines simplicity with excellent optics, along with the user adjustable parallax and rugged reliability of the lens-lock system, meaning no zero shift – making the UL the perfect choice for heavy recoiling rifles.

MODELS AVAILABLE:

3-9x40

- 1" tube Low profile turrets
- 3-9x zoom
- AMD reticle, 2nd focal plane
- Zero-Lock system to lock aim point setting
- Parallax set/reset by simple adjustment
- Flip-up covers and sunshade supplied

MTC OPTISAN RANGE:

MTC is the UK importer of OPTISAN rifle scopes. Optisan supply a range of well-made and cleverly designed mid-range scopes. Optisan have repositioned themselves as a stand-alone manufacturer and currently offer two types of scopes: the feature-rich EVX which is heavily based on the now deleted MTC VIPER scope that was made for MTC by Optisan and the simpler HX; which never-the-less features great optics.

MH10

MODELS AVAILABLE:

10x44i
3-12x44i
4-16x44i
5-20x50i
6-24x56i

OPTISAN EVX

- Second focal plane multi-aim point MH10 reticle
- Lockable target turrets
- 30mm tube
- Thumbwheel adjustable windage and elevation turrets
- Side adjustable parallax from 10 yards
- Adjustable illuminated reticle
- 3 inch sidewheel
- Metal scope covers
- Sunshade

FIRST FOCAL PLANE (FFP) vs. SECOND FOCAL PLANE (SFP) RETICLE

FFP = Reticle size changes with the magnification – good for maintaining a constant point of aim at different magnifications.

SFP = Reticle size stays the same regardless of the zoom position.

MH16

OPTISAN EVX F1

Similar in specification to the other EVX scopes, but without the illuminated reticle and fitted with a first focal plane reticle. FFP scopes are quite rare and command a premium price due to the high level of engineering required in their construction. OPTISAN are proud to incorporate such a scope in their range.

MODELS AVAILABLE:

4-16x44F1

6-24x50F1

- Lockable target turrets
- 30mm tube
- First focal plane MH16 reticle
- Thumbwheel adjustable windage and elevation turrets
- Side adjustable parallax from 10 yards
- Metal flip up scope covers
- Sunshade

OPTISAN HX:

When optical quality is of prime concern, and not the quantity of features, these simple lightweight scopes are ideal for most hunting trips. With a fixed parallax set at 50 yards the scope is ideal for rimfire and full bore rifles alike.

Two reticle types are offered: Bullet Compensated Reticle (BCR) or a traditional Duplex Reticle

MODELS AVAILABLE:

3-9x40
4-12x40

BCR

DUPLEX

EMD12

OPTISAN HX 4-12x40A0

With its adjustable objective lens that allows parallax adjustment from 10 yards out to infinity, this scope is ideal for the air gunner or small bore shooter where looking at closer targets is necessary. Its Enhanced Mil Dot reticle is true at 12 power and features extra ½ mildot markings - useful when finer points of aim are needed

MODELS AVAILABLE:

4-12x40

RAPIER RANGEFINDER:

With 6x magnification and a 25mm objective lens, the Rapier offers outstanding performance, but its crowning glory is the super bright OLED display. This lights up, allowing the rangefinder to be clearly read in low light conditions, and in the dark with a light source. Effective from 7 to 1000 metres, this is one of the best rangefinders available on the market – at any price

BLUE PRINT MOUNTS:

Made exclusively in the UK by Sportsmatch these double-screw mounts are available in low, medium and high format, with 25 or 30 mm rings and rust-proofed mounting screws. Commonly used on rimfire and airguns Blueprint mounts double screw fixings avoid scope movement (creep) of inferior, cheaper mounts.

PICATINNY DOVETAILS

Picatinny mounts are used on the tactical rail on many firearms

BLUEPRINT MOUNTS

- 9.5 – 11.5mm (3/8") dovetails
- 25mm double strap low medium or high available in black
- 25mm double strap medium or high available in silver
- 30mm double strap medium or high available in black
- 30mm double strap medium or high available in silver
- Viper Connect 30mm high available in black

PICATINNY DOVETAILS

- 25mm double strap medium or high available in black
- 30mm double strap medium or high available in black
